### EXPERIMENT 09

AIM: Perform Information Gathering / Footprinting

THEORY: Information gathering also known as reconnaissance, is a crucial initial phase in cybersecurity, it involves collecting as much relevant data as possible about a target system or network to identify potential vulnerabilities and attack vectors

- 1) Passive Information Gathering: This involves gathering information without directly interacting with the target, which includes searching online public sources such as social media.
- 2) Active Information Gathering: It involves more direct interaction with the target system. Techniques may include port scanning, network mapping & service enumeration, etc.
- 3) Footprinting: This is the process of collecting information about the target organization. Networks, system and infrastructure involves

identifying IP addresses, domain names, network blocks etc.

- 4) Social Engineering: This technique involves manipulating individuals within the target organization to divulge confidential information or perform actions that compromise security.

CONCLUSION: Thus we have learnt how important information gathering is in cybersecurity & how to perform it using various tools.
